## Using Vision Anywhere in a Shared Care Setting

Most Vision Anywhere functionality is the same whether you are accessing your practice's registered patients or are working as part of a shared care organisation. The following functionality is specific to shared care access:

- **Logging in** - When you login to Vision Anywhere, you have the option of selecting your local practice or your shared care service. You can subsequently select the relevant shared appointment list.

- **Registration Status** - Vision Anywhere currently supports patients with the permanent and applied status.
- **Patient Consent** - This must be recorded in order to access the patient's record. See - [Consent](#) on page 6.
- **Patient Selection** - When manually searching for a patient, you can see which practice they are registered at. You can also select patients at EMIS practices if they are part of your shared care organisation.

- **Acute Printing/Re-printing** - In a shared care setting and if using Windows 7, you can print and reprint acute prescriptions. The print option is available from the **Current Encounter** view after prescribing.

- **Repeat Medication Management** - Full repeat medication management is available for Vision registered patients if the Vision version for all practices in the organisation is DLM 485 or above. If one practice is on a lesser version, basic repeat lists are displayed for all patients.
- **EMIS Patients** - Full repeat medication management, decision support, access to care reminders and correspondence is not currently available when you have an EMIS patient selected.
- **Windows 7 Minimum Specification**
  - Processor 1.33 GHz
  - RAM 2 GB RAM
  - OS Windows 7 SP1, 32-bit and 64-bit
  - Disk space 10 GB

See also - [Video Tutorials](#).

## Consent

When Vision Anywhere is used in a Shared Care Service a consent model is implemented to ensure that a legitimate relationship exists with a patient, before their record can be viewed.

**Patient Consent**

Confirm that the patient has given permission to access their record by selecting the most appropriate option from this list

- General practice registration
- Expressed patient consent to access
- Patient has given consent
- Emergency Consent
- Self-claimed relationship
- External access

*Select open when reason is recorded*

*Record the consent reason to access the patient's record*

*If a patient refuses to give consent a consultation can be recorded without access to the record*

The screenshot shows a form titled 'Patient Consent' with a list of six options. The 'Open' button is highlighted with a red box. Hand-drawn arrows point from the list to the 'Open' button and from the 'Record a consultation without consent' button to the explanatory text on the right.

## Consent reasons

The clinician must record patient consent, i.e. confirm that the patient has given permission to access their record by selecting the most appropriate option from the following list:

- **General practice registration** - when the patient is actually registered to the clinician's home practice.
- **Expressed patient consent to access** - patient has given consent.
- **Self-claimed relationship** - when it's in the best interest of patient OR court order OR public interest.
- **External access** - when user is not a GP/hub user and are accessing the patient out-with the service e.g. an auditor.
- **Patient had given consent** - patient has given consent.
- **Emergency consent** - emergency access for urgent treatment when patient is incapacitated.

If a patient has dissented to share their record with the service, when a consent reason is chosen, the message "**Please note that the patient has withdrawn consent from this service**" displays.

Select "**Record a consultation without consent**" to proceed.

**KANE, Joseph (Mr)** Born 28-Dec-2004 (12y) Gender Male NHS 421 120 6621

 **Patient Consent**

Please note that the patient has withdrawn consent from this service.

 Record a consultation without consent

See - [Using Vision Anywhere in a Shared Care Setting](#) on page 4

## Write Back

---

Once information has been added into Vision Anywhere and the encounter is closed, it is then automatically sent back to the patient's record in either Vision or EMIS.

Any consultations recorded in a shared care setting have "Dr Federated User" as the clinician.

### Vision Practices

The encounter automatically codes into the patient's record.

The consultation details display as normal in the journal.

25/04/17		Peak exp. flow rate: PEFR/PFR : = 500 L/min
		BP 110 / 70 O/E - blood pressure reading
		Never smoked Never smoked
		Weight 1.3 kgs O/E - weight
		FLU Stage: 0 Given

### EMIS Practices

The coded clinical data automatically files into the patient record, however due to a limitation on the EMIS API any medication prescribed is degraded - and therefore needs to be added by the practice staff.

10-Nov-2015	GP Surgery	USER, Federated (M)
Medication	Montaxon 40mg tablets One a Day 7 tablet	
Comment	Blood sample taken Blood sample taken U&L, UFT, Lipids Chesty cough Chesty cough for 1/52	
10-Nov-2015	GP Surgery	USER, Federated (M)
Medication	Ramipril 10mg tablets one a day 28 tablet	
10-Nov-2015	GP Surgery	USER, Federated (M)
Comment	O/E - blood pressure reading BP 120 / 94 O/E - blood pressure reading	
10-Nov-2015	GP Surgery	USER, Federated (M)
Medication	Paracetamol 500mg tablets 1tbl and 100 tablet	
Comment	Urine sample sent to Lab Urine sample sent to Lab	
Comment	O/E - pulse rate O/E - pulse rate beats/min 97 O/E - BP reading BP 145 / 85 O/E - BP reading Pain in eye Pain in eye Examination done - no reason	

An email alert also generates to advise the practice that an encounter has been recorded in the shared care setting.

## Prescriptions - Shared Care

Any medication prescribed in a Shared Care setting displays the **Prescribed out of Practice** flag next to the item in Vision 3.

The screenshot shows a table with columns for Date, Description, Priority, and Clinician. The entry for 11/08/17 includes a consultation note and a prescription for Anadin Ibuprofen 200mg tablets. A red flag icon next to the drug name indicates it is 'Prescribed out of practice'. The clinician listed is 'FEDUS'.

Date	Description	Priority	Clinician
11/08/17	Consultation NHS Vision Test: Seen by Clinician: Dr Julia Wilson at 07:54:31 on 11-Aug-2017 Anadin Ibuprofen 200mg tablets (Pfizer Consumer Healthcare Ltd) Supply ( 28 ) tablet 1 tablet THREE times daily	3	FEDUS

When the entry is viewed, the source displays as "**By GP in another practice**". If the medication was printed, the date is also recorded.

The screenshot shows the 'Acute Therapy - Display' window. The 'Source of Drug' dropdown is set to 'By GP in another practice'. The 'Date Prescribed' is 11 August 2017. The drug is Anadin Ibuprofen 200mg tablets (Pfizer Consumer Healthcare Ltd). The quantity is 28, preparation is tablet, pack size is 28, treat days is 28, and batch number is blank. The dosage is 1 TABLET THREE TIMES DAILY. The drug class is Non-steroidal anti-inflammatory drugs. The footer shows 'This script was signed by Mr Federated Locum' and 'Printed on 11 August 2017'.

For EMIS sites see - [Write Back](#) on page 8.
